Astronomy evolving to a data-rich field

- While the amount of data is growing exponentially, the number of scientists working with it is growing linearly.
- This means that in the future data might compete to get users to look at them, and not viceversa as it happens now. (!)

A growing number of archival papers

➤ Image from the HST 10,000 science publications press release in June 2011, showing the number of archival papers (AR) increasing whilst General Observer (GO) papers are around the same number from 1997 to 2010:

➤ One reason for the surge -> the telescope's longevity. Hubble has amassed almost 27 years of data, and astronomers are finding new uses for the data. Projects not imagined when observations were taken.

→ ESA'S FLEET ACROSS THE SPECTRUM

Thanks to cutting edge technology, astronomy is unveiling a new world around us. With ESA's fleet of spacecraft, we can explore the full spectrum of light and probe the fundamental physics that underlies our entire Universe. From cool and dusty star formation revealed only at infrared wavelengths, to hot and violent high-energy phenomena, ESA missions are charting our cosmos and even looking back to the dawn of time to discover more about our place in space.

ESASky concept

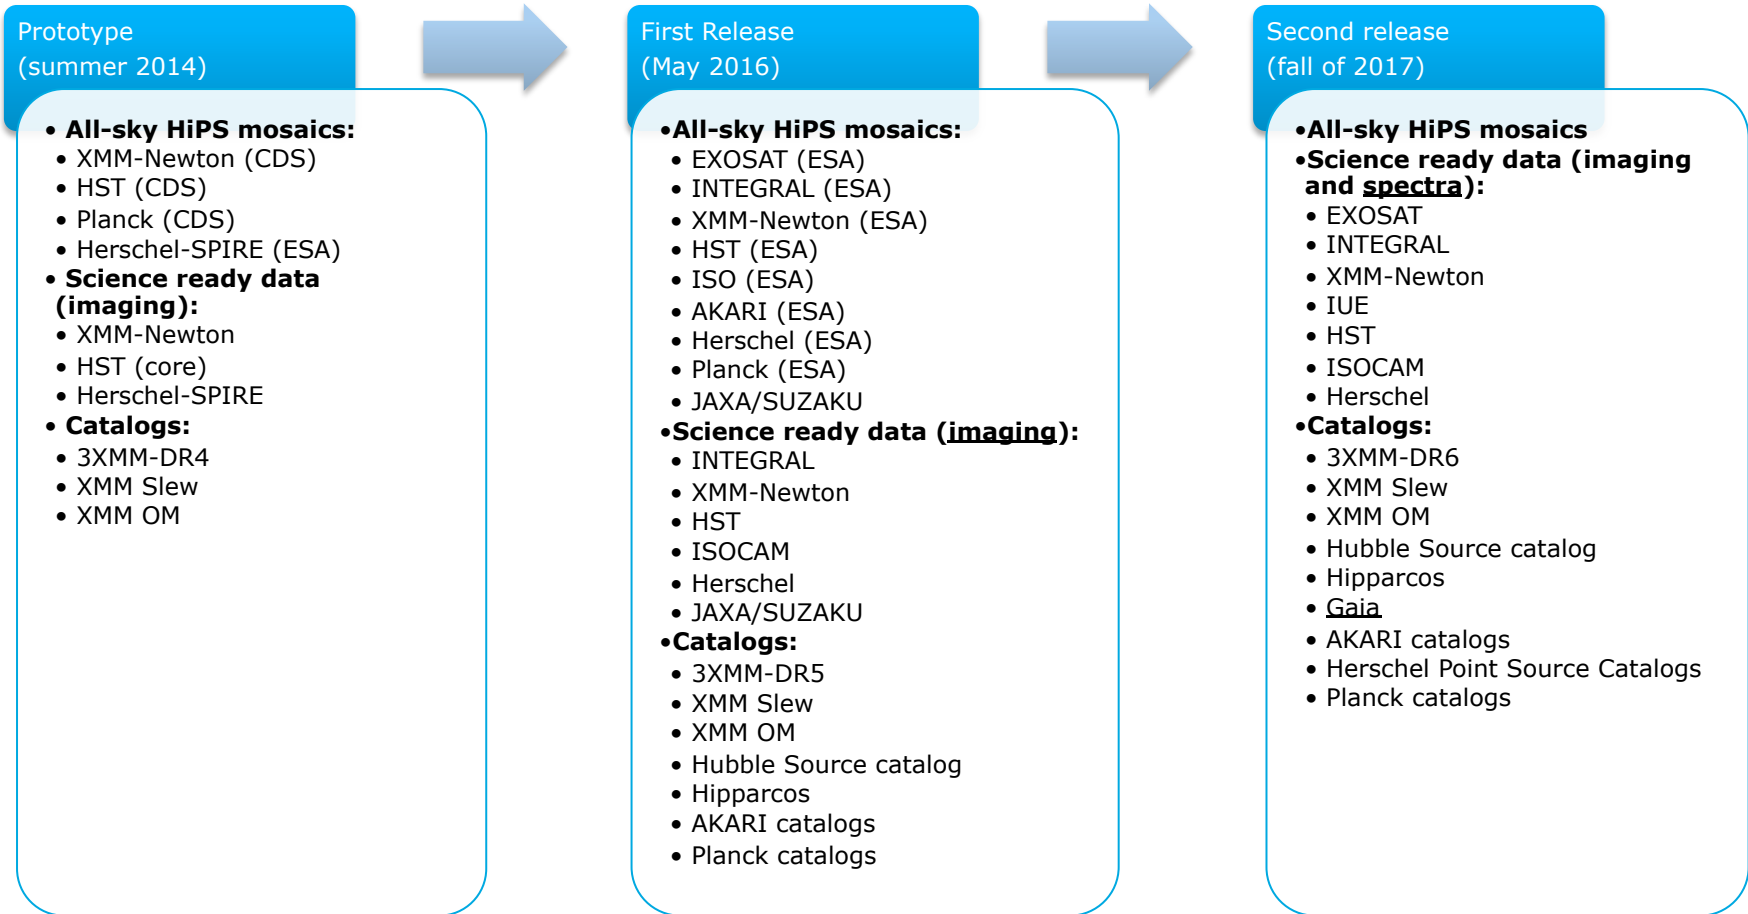

- **Goal:** to facilitate data discovery and archival science for ALL users
 - Multi-wavelength
 - Project agnostic
 - Exploration
- Interface to all astronomy archives

ESASky

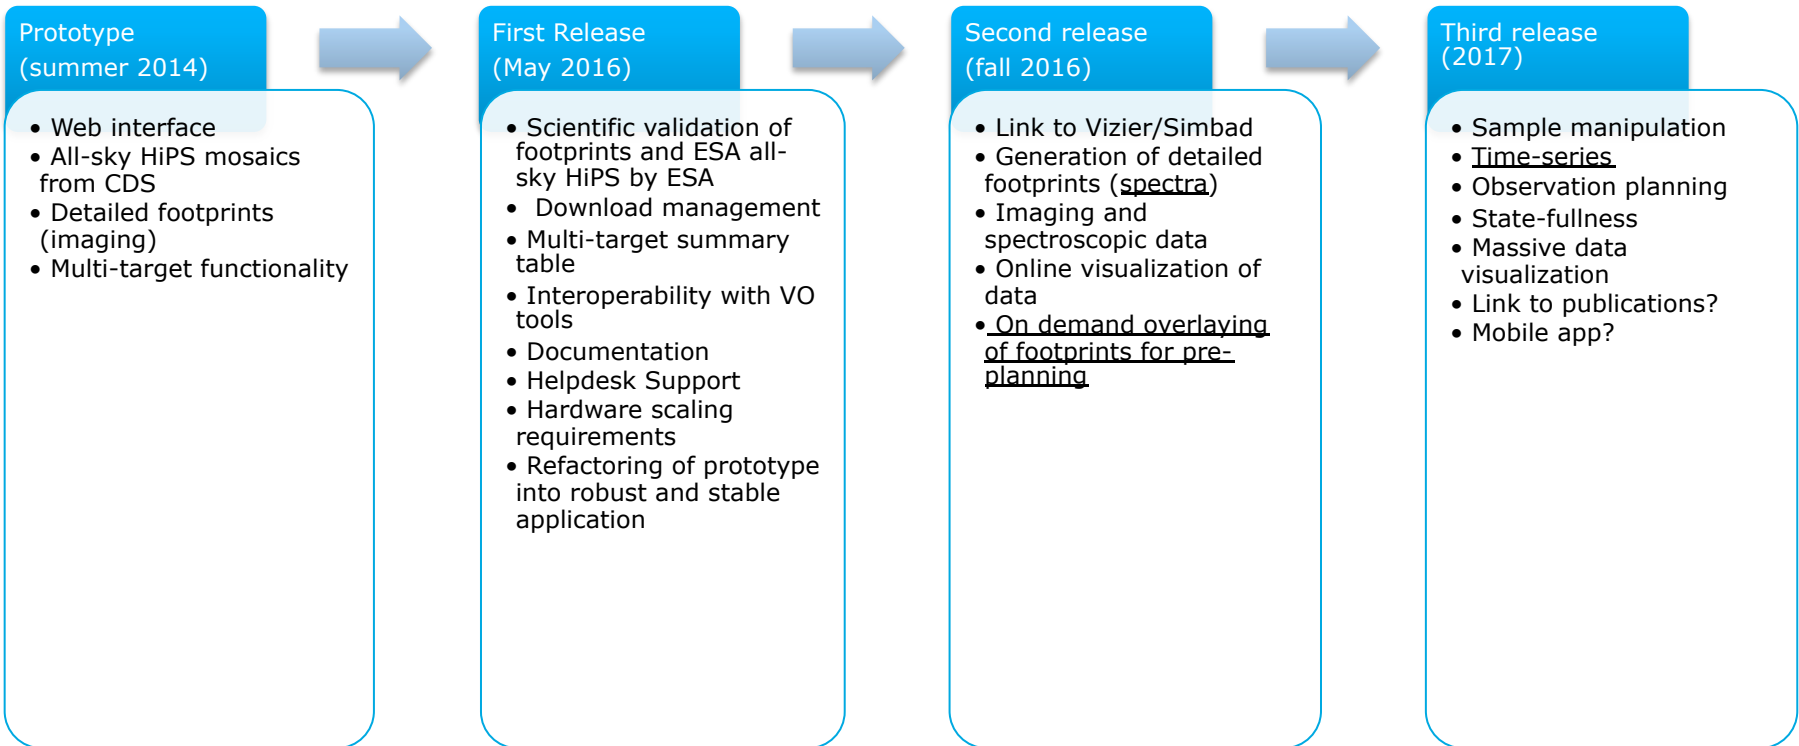

- First release in May 2016: <http://sky.esa.int>

ESASky data contents roadmap

Aim: continuous integration, testing and releasing

ESASky feature roadmap

Aim: continuous integration, testing and releasing

Try the ESASky yourself !

The screenshot shows the ESASky web interface. At the top, there's a browser window with the URL `archives.esac.esa.int/esasky-beta/`. Below the browser, there's a search bar with `m 83` and an `Upload target list` button. The main area is a 3D sky map with observation footprints in cyan and yellow. A large white text overlay reads `http://sky.esa.int`. Below that, another white text overlay reads `Video at https://youtu.be/OfcKznpXUr4`. At the bottom, there's a data panel with tabs for `Data Panel`, `XMM-Newton`, `XMM-OM(UV)`, `HST`, `ISO`, and `Herschel`. Below the tabs is a table with columns for `ObservationId`, `Instrument`, `RA (J2000)`, and `DEC (J2000)`. A message at the bottom of the map says `Showing global sky coverage for the mission. Zoom in to get the actual footprints of the individual observations.` At the very bottom, there's a `Close data panel` button and the ESA logo.

Additional slides

ESASky v1.0 - Backend Data Generation

- HiPS: Hierarchical Progressive Survey
 - HEALPix sky tessellation
 - Number of levels depend on pixel angular resolution
 - Planck (low) 3 levels
 - Herschel (medium) 7 levels
 - HST (high) 14 levels

- Footprints
 - HST: Provided by project
 - Herschel: Footprint Finder (ST-ECF)
 - XMM: Instrumental + pointing

ESASky v1.0- Backend Data Access

- Apache HTTP Server
 - Serves HiPS requests
- Java Servlet container
 - Serves TAP & Target Resolver requests
- Database
 - PostgreSQL DB
 - Spherical data types library (PgSphere)
 - Footprints -> Spherical data types
- Usage of IVOA Protocols & Standards
 - TAP requests
 - ADQL translation to SQL + PgSphere
 - Storage of STC-S footprint information

ESASky v1.0 - Frontend

- Running on a Web Browser (HTML5/CSS3)
- Google Web Toolkit
 - Aladin Lite wrapper (JSNI)
 - Data Visualization (Highcharts)
- Usage of IVOA Protocols
 - TAP accessing archive metadata
 - ADQL describing complex FoVs
- Astronomical services access
 - Target coordinates resolver
 - Angular size resolver

Highcharts JS

- Fabrizio Giordano (key person, full-time)
- Henrik Norman (full-time, GUI and astropy)
- María Henar Sarmiento (part-time, GUI)
- Elena Racero (part-time, HiPS and footprints)
- Belén López Martí (full-time EXPRO, HiPS development)
- Pilar de Teodoro (part-time, DB)
- Sara Nieto (part-time, DB ingestion)
- Raúl Gutiérrez (part-time, backend)
- Juan González (part-time, DB optimization)
